

THE LIVENGOOD SURGE CAPACITY SOLUTIONS

HOW IT WORKS

- + Securely mount monitors, ventilators, IV pumps, supplies and headwall gases next to the patient.
- + Tap directly into existing oxygen/vacuum headwalls to extend reach into non-patient care areas.
- + Multiple LIVENGOODs can be daisy-chained together for multiple patients with seamless surge to MCI transition.
- + UL60601-1 approved and compliant with Joint Commission and ISO standards.

DAILY USE – A SEAMLESS TRANSITION TO OVERFLOW

- + Utilize daily for trauma, cardiac patients & psychiatric rooms.
- + Increase flexible capacity in the Emergency Department utilizing hallways, ambulance bays and conference rooms without remodeling.
- + Expand ICU surge capacity with no remodeling or temporarily upgrade existing Med/Surg rooms.

EMERGENCY PREPAREDNESS – A BUILT IN DISASTER RESPONSE SOLUTION

- + Immediate availability from daily use ensures seamless transition from Surge to MCI.
- + Absorb an influx of patients by increasing patient capacity by 20%.
- + Relocate to create a comprehensive medical environment in alternate care areas like disaster shelters.

UNCOMPROMISED PATIENT CARE

We manage daily overflow to help hospitals make the most of existing space. Our simple, compliant solution can expand the capacity of the ER, ICU, or make up the entire medical environment in alternate care areas like disaster shelters. The ER and ICU modules were designed by doctors and nurses to leverage extra space during daily overflow with the goal of keeping all equipment and gases within arms reach of patients. They simultaneously serve as a built-in disaster response solution, giving hospitals the ability to absorb and treat a large influx of patients outside of traditional care environments.

CUSTOM CONFIGURATIONS AVAILABLE

Mounting locations available for up to:

- Ventilator (2)
- Monitor (2)
- Portable Suction (2)
- Oxygen Cylinders
- IV pumps
- Defibrillator (1)
- Oxygen Outlets
- Vacuum Outlets

Supply drawers available
with or without locks

Adjustable IV poles by Provita

Storage bins for:

- Blood pressure cuffs
- Ventilator circuits

8 Outlet electrical box
for cord consolidation

6" braked wheels
for ease of maneuverability

Pandemic Units with multiple oxygen, suction, ventilator and monitor mounts available (not shown).
